Why AI & Circular connection is so important?

Oct 11, 2024 — by Beata Mosór in AI, Circular, Strategic

Authors:

AI Insights: Google AI Studio

Human Perspective: Beata Mosór

AI & Circularity – Where it Begins?

Imagine a world where you only work with super geniuses, species that are far more intelligent than you, and they are capable of doing everything much faster, much more efficient, without the waste of resources, just based on your request as a one team with you. It's like a gin – isn't it? Actually it's AI. There is a lot of predictions that we as humans will work soon only with AI agents/models/robots, and they will replace human work with their actions giving us abnormal capabilities in our hands.

Economy

The Liquid Future: AI Economy

02.01.2026 — 11:11

Preamble: The Future is Liquid

The future is liquid. This is not a metaphor; it is a diagnosis of our reality. The solid, predictable structures of the 20th-century economy, society, and business are dissolving under the immense, transformative pressure of Artificial Intelligence. AI is not merely another technology to be integrated into existing models. It is a fundamental, generative force reshaping our world at a civilizational level, giving birth to a new paradigm: the AI Economy. We stand at the precipice of a profound transition, one that demands we abandon the maps of the old world and learn to navigate a dynamic, fluid, and intelligent new reality.

Economical Construction

Shareholders	Microeconomic input	Engine	Macroeconomic output
Households	Workforce	Human Labor	Consumption
Businesses	Capital	Production	Investment
Local Government	Infrastructure	Technology	Gov Spending
Countries	Natural Resources	Exchange	Net Exports

Economical Disruption

Disruption ≠ Destruction

Disruption is the action of preventing something, especially a system, process, or event, from continuing as usual or as expected.

Cambridge Dictionary

Disruptive innovation - when a smaller company with fewer resources successfully challenges established incumbent businesses by offering simpler, more accessible, or cheaper alternatives.

Clayton Christensen

Disruptive innovation - when a smaller **entity** with fewer resources successfully challenges established incumbent **systems** by offering simpler, more accessible, or cheaper **solutions**.

eurostat

Around 20.5% of the adult EU population lives alone, making single-adult households the fastest-growing and most common household type across Europe.

In 2025, 203.1 million households resided in the EU. In the same year, the EU had **the highest number of single adult households without children (76.1 million)**, followed by couples without children (48.9 million), other types of households without children (30.7 million) and couples with children (29.9 million).

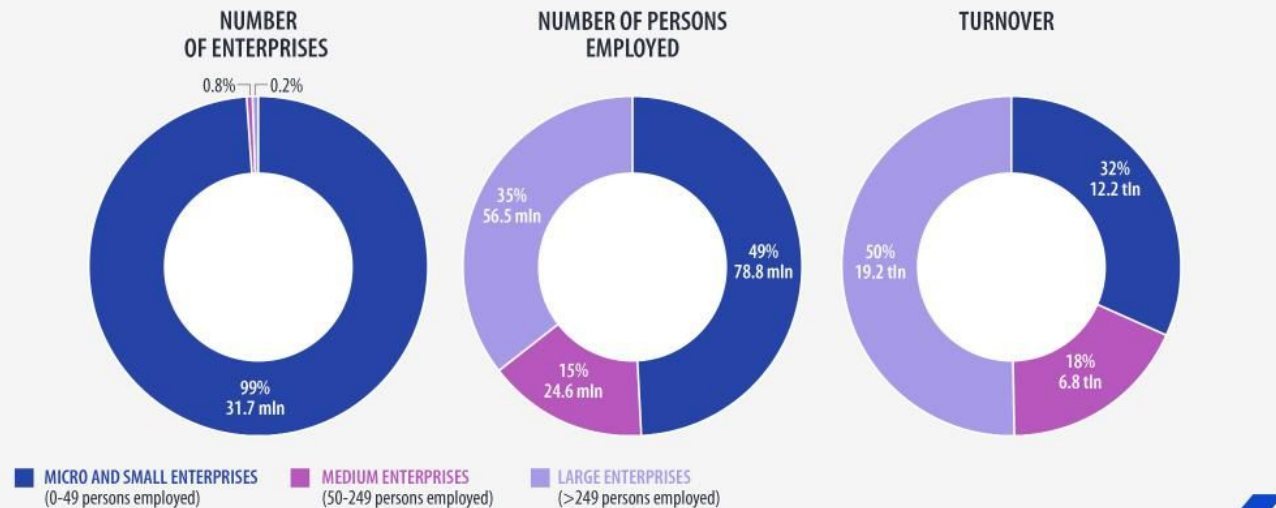

Economical Decentralisation | Workforce

The global decentralized workforce has expanded rapidly, with remote and hybrid models now covering 48% of the global workforce. Driven by freelance economies and digital nomadism, the gig economy now accounts for 36% of the US labor force.

Economical Decentralisation | Businesses

Business economy by size class in 2022

(% of size class, absolute values by NACE Rev. 2)

Preliminary data. Due to rounding, values may not add up to 100%.

eurostat 

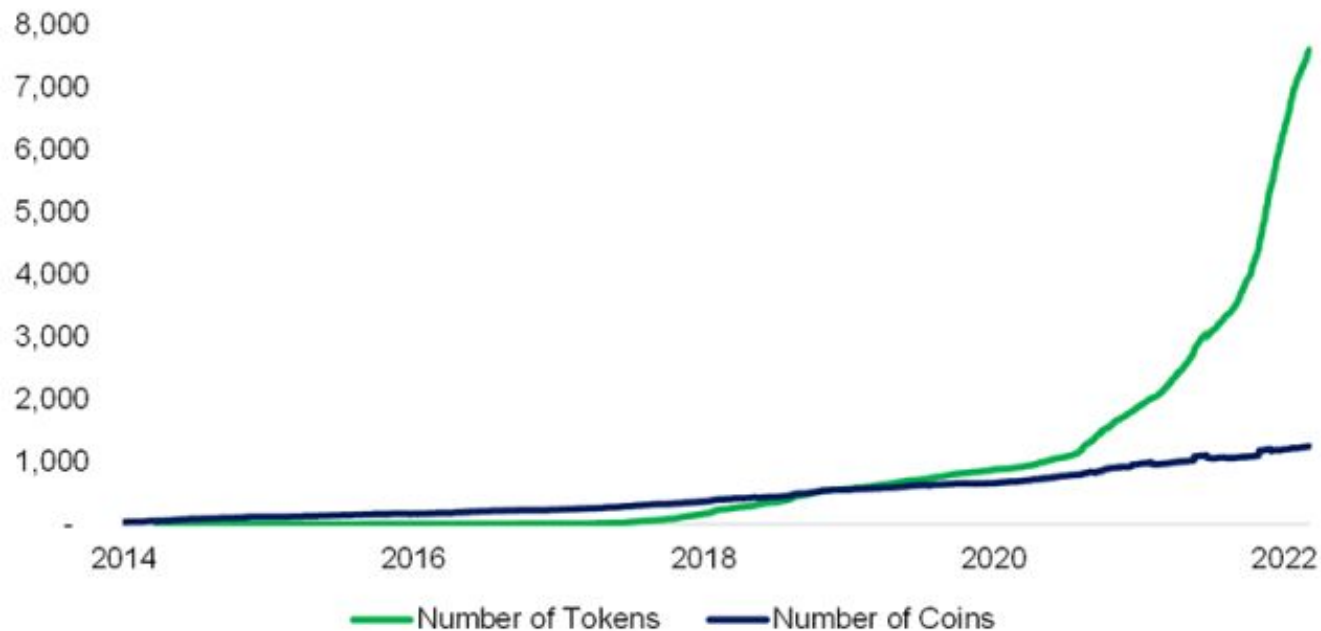

Moreover, between March 2023 and March 2024, small businesses were responsible for creating 88.9% (or approximately 9 out of 10) of all net new jobs in U.S.

The number of small businesses in the U.S. actually increased from about 33.2 million in 2023-2024 to 36.2 million. These statistics reflect an unprecedented boom in the entrepreneurship market. U.S. Office The Small Business Administration (SBA) indicates that small businesses now account for 99.9% of all U.S. businesses and generate nearly 46% of private sector jobs.

Economical Decentralisation | Capital

Economical Decentralisation | DEX

Economical Decentralisation | Transactions

According to the 2025 UBS wealth report, the U.S. added more than 379,000 millionaires in 2024, an average of over 1,000 per day.

That growth brings the total number of U.S. millionaires to roughly 24 million— the largest concentration of wealth holders anywhere on Earth.

SMALL LANGUAGE MODELS FOR AGENTIC AI

Small Language Models are the Future of Agentic AI

Peter Rehak¹ Greg Heitrich² Shihab Dine³ Yungang Fu⁴ Xin Dong⁵
Suresh Marudharan⁶ Yingyan Celine Liu⁷ Parth Madhavan⁸

agent@berilla.com

Abstract

Large language models (LLMs) are often praised for exhibiting near-human performance on a wide range of tasks and valued for their ability to hold a general conversation. The rise of agentic AI systems is, however, sobering in a mass of applications in which language models perform a small number of specialized tasks repeatedly and with little variation.

Here we lay out the position that small language models (SLMs) are *significantly* *powerful*, *robustly more versatile*, and *invariably more economical* for many *innovative* *in agentic systems*, and are *therefore the future of agentic AI*. Our argumentation is grounded in the current level of capabilities exhibited by SLMs, the common architectures of agentic systems, and the economy of LM deployment. We further argue that in situations where general-purpose conversational abilities

Ford Would Replace Gold With Energy Currency and Stop Wars

Declares if Government Will Give Him Muscle Shoals Plant He Can Demonstrate Success of Plan to Sub- stitute Natural Wealth as Basis of World's Money

FLORENCE, Ala., Dec. 3.—Henry Ford and Thomas A. Edison arrived here to-day to inspect the Muscle Shoals nitrate plant, which the Detroit automobile manufacturer proposes to take over from the government, and almost immediately Mr. Ford declared the purpose of his vast new project. It is not to make money, or, primarily, to stimulate the

bankers who to-day control the bulk of the world's gold supply. No matter to what country they as individuals claim allegiance, they all play the same game to keep the gold they have in their own hands and to get just as much more as possible. "With the international bankers the fostering, starting and fighting of a war is nothing more nor less than creating an active market for money—a business transaction. If the different
